KELVIN OSASOGIE OSA-IZEKO

Backend-Focused Full Stack Developer

Benin City, Nigeria | +234 707 991 0073 | kosaizeko@gmail.com

GitHub: koolkeyzs | LinkedIn | Portfolio: journextech.vercel.app | Fiverr Profile

PROFESSIONAL SUMMARY

Backend-focused full-stack developer specializing in Node.js, Express, PostgreSQL, and MongoDB, with growing expertise in caching, real-time systems, and application security. Founder of Journex Technologies — designed and shipped Journex, a full-stack journaling and community platform, from concept to live deployment. Built additional backend-heavy projects demonstrating production concepts including per-key rate limiting, event-driven architecture, and memory-safe data streaming. Currently studying Chemical Engineering at the University of Benin while building real-world software products and freelance client work.

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript
- Frontend: React.js, Next.js, Tailwind CSS
- Backend: Node.js, Express.js, REST API Design, Server-Sent Events (SSE), Node Streams & EventEmitter
- Databases: MongoDB, PostgreSQL
- Other: Redis (caching), JWT Authentication, API & Application Security, Git/GitHub

PROJECTS

Journex — Faith-Centered Journaling & Community Platform (Live App)

- Designed and built a full-stack journaling and community platform end-to-end, from concept to live deployment.
- Implemented user authentication, private journal entries, a community feed, and daily scripture features.
- Tech stack: React, Node.js, Express, MongoDB. Founder and sole developer — owned the product from idea through launch.

Pathshort — URL Shortener with Real-Time Click Analytics

- Built a full-stack URL shortener that tracks per-click data (timestamp, referrer) and visualizes it on a live analytics dashboard.
- Designed the MongoDB schema and API to support redirect logic and click analytics without added latency.
- Tech stack: Node.js, Express, MongoDB, React, Recharts. Deployed on Render and Vercel.

Ratekeep — Rate-Limited API with Live Usage Dashboard

- Built a per-key API rate limiter and usage dashboard using core Node.js primitives rather than off-the-shelf middleware.
- Used a custom EventEmitter to decouple request logging from request handling, and a MongoDB-cursor-fed Transform stream to export usage history as CSV with constant memory use.
- Implemented a live request feed using Server-Sent Events (SSE), powered by the same event system.
- Tech stack: Node.js, Express, MongoDB, React. Deployed on Render and Vercel.

RELEVANT EXPERIENCE

Founder & Developer — Journex Technologies

- Founded and built Journex Technologies, focused on digital products at the intersection of technology and community.
- Designed, developed, and deployed Journex solo, handling both frontend and backend architecture.

Freelance Full Stack Developer — Fiverr

- Offer backend and full-stack web development services, including REST API development, database design, and secure authentication systems.

EDUCATION

B.Eng. Chemical Engineering — University of Benin *Expected 2027*

ADDITIONAL LEARNING

- Completed The Web Developer Bootcamp (Colt Steele, Udemy) — HTML, CSS, JavaScript, DOM, Node.js, Express, MongoDB, React.
- Ongoing self-directed backend curriculum covering core Node.js internals, Streams, EventEmitter, Worker Threads, and system-level programming.
- Actively expanding into PostgreSQL, Redis caching, Docker, and application security best practices.
